ROLL-PACKER RP 7000

The RP 7000 Classic Roll-Packer

- Designed for the compaction of light waste i.e. Cardboard, paper, plastic etc.
- The RP 7000 Roll-Packer, designed for use in conjunction with open containers, offers you major advantages for the disposal of your waste and recyclable materials.
- There is no longer any need to pre-crush, tear up, shred or flatten bulky waste. The RP 7000 Roll-Packer **crushes**,

shreds and compacts the waste material immediately after it is thrown into the container.

- The RP 7000 Roll-Packer rotates continuously, breaking up the material structures, and thus achieves an unrivalled degree of compaction. So, **three, four or five times** the quantity of waste can be put into the container.
- Using your existing waste collection system with open roll-on-off containers, you achieve a significant reduction in your disposal costs with the RP 7000 Roll-Packer. Why pay a waste disposal contractor to collect 80% air and only 20% rubbish?

Type: RP 7000 „Classic“

Technical Data

Net weight:	2,100 kg
Weight of compaction drum:	750 kg
Electrical data:	1.5kW / 380-415V / 50Hz
